

CUSTOMER WOOS CLM MULIASHI LEACH PLANT HIGH-QUALITY COPPER CATHODES

By the end of September 2012, Muliashi Leach Plant of CNMC Luanshya Copper Mines Plc, an enterprise of our company in Zambia, had produced 6,300 tons of 99.99% copper cathodes. Customer woos it.

A key project of our company, Muliashi Project has a designed annual output of 41,000 tons of copper cathodes and involves two technological processes, namely agitation leaching and heap leaching. The copper cathodes already produced are the product of agitation leaching. The facilities for heap leaching are under construction. Some tons of the aforesaid copper cathodes product are sold to TRAFIGURA Company while the others have been smoothly sold to some companies via CNIT. These companies, including Shandong Aobote, Shenzhen Maichuang, and Hailiang Group, mainly use it to produce copper tubes, plates, and strips. The product quality has been highly recognized by all end users, who

commented: “With high evenness and little impurity, the copper cathodes produced by CNMC Luanshya Copper Mines guarantees a good use result.” They have also expressed their intention of establishing a long-term cooperation relation with our company.
