

# Environmental Impact Assessment Report for Chambishi Southeast Ore Body Approved by the Environmental Council of Zambia

Recently, the Environmental Council of Zambia approved the Environmental Impact Assessment Report for Chambishi Southeast Ore Body, which means the all-out construction of this project is to begin soon.

Development of Chambishi southeast ore body is a key project planned by NFC Africa Mining Plc, a Zambia-stationed enterprise of our company. According to the design, its annual mining and dressing capacity is 3.30 million tons and its annual output of copper contained in copper concentrate is 63,000 tons. It is planned to be put into production by 2016, which will further increase not only the production capacity of our company's mines, but the raw material self-supply rate of Chambishi Copper Smelter Limited.
