

**Meeting for reviewing the design of the working
drawing plan for paste filling in Chambishi West Ore
Body held in Beijing**

On August 11, 2012, NFC Africa Mining Plc, a Zambia-stationed enterprise of our company, organized in Beijing a “meeting for reviewing the design of the working drawing plan for paste filling in Chambishi West Ore Body” in Beijing, which involved some relevant experts.

Application of paste filling can increase the utilization rate of mine resources and is good for upgrading corporate economic benefit. China Enfi Engineering Corporation of China Mine Engineering Design Senior Research Institute presided over the design of this project. Through careful discussion, the experts present at the meeting hold that the application of the paste filling plan for Chambishi West Ore Body is appropriate. They hold that the plan involves complete design material, reliable data, correct technical route, and reasonable technological flow. They suggest that the construction be started as soon as possible.
